

Target Architecture — Single-Tenant (Client Cloud Deployed)

Production-only · cloud-agnostic (maps to AWS / Azure / GCP) · one dedicated stack per client · hardened baseline — all controls in place (✓)

TARGET / HARDENED

Status

✓ control implemented & enforced
Isolation model: dedicated cluster + dedicated managed data per client (strong)

Target Network — Single-Tenant (Client Cloud Deployed)

Production-only · cloud-agnostic · dedicated VPC + private cluster + managed data per client · all data services managed (no in-cluster DBs)

→ inbound HTTPS - - → egress to internet (NAT) - - → egress to cloud APIs (private) → private peering to managed data ✓ configured & enforced

CLIENT PROD CLUSTER · NETWORK (dedicated per client)

Cloud-agnostic — managed K8s (EKS/AKS/GKE) · region per client · single production namespace
